Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-14 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The application discloses means which are a liquid crystal array which uses the effective variation of the liquid crystal refractive index in an array to steer the light beam (figure 7). The only way that this can be done as shown in figure 7 is using the coherent effect of the wavefront across the different channels of the array, hence a diffractive effect. Please note that the wavefront is perpendicular to the surface, so there would be no bending of the light without a diffractive effect. As there are no means which are purely refractive disclosed (they appear to be diffraction caused by a change in refractive index and therefore path length so as to form a phase grating). Additionally, although one of ordinary skill knows how to refract light, it is unclear how to do it with an array, as why the array is there is not clear, so it would be

unclear how to configure it, and how to get it to perform the function shown without a diffractive effect would be unclear.

Response to Arguments

Applicant's argument are agreed with in part. The claims do state refracting the light to change direction, which is not shown in the references. Unfortunately, a refracting array was not found (which does not use a diffractive effect), and the means shown in the specification appear to be diffractive, an enablement question has been raised. Discussion with the examiner may be helpful in resolving the issue, and applicant is invited to call at 703-305-6202.
